CI\CD into  
revenue

## Continuous Integration

is the practice of integrating code into a shared repository and building/testing each change automatically, as early as possible - usually several times a day.

## Continuous Delivery

adds that the software can be released to production at any time, often by automatically pushing changes to a staging system

## What is CI/CD?

## Continuous Deployment

goes further and pushes changes to production automatically

## Why (CI/CD)?

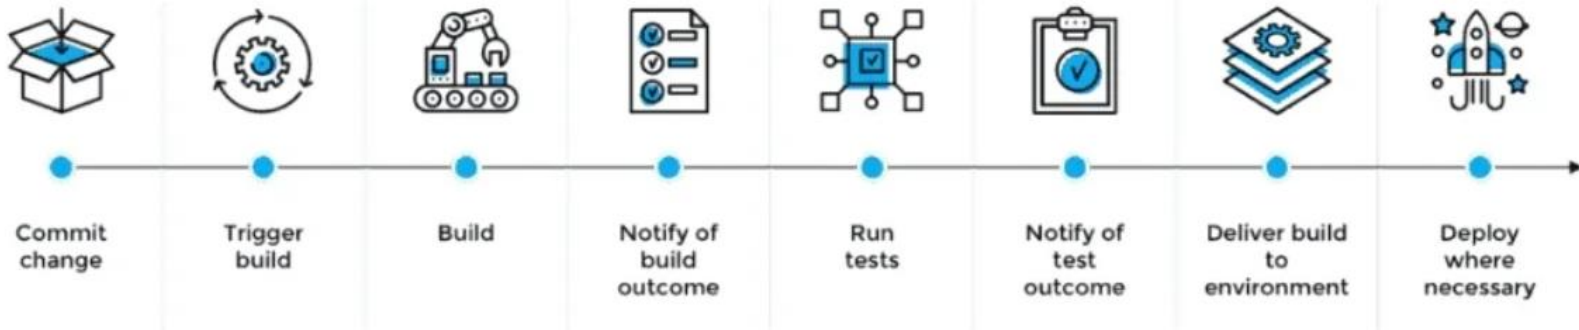

### Continuous Integration

- Detects errors as quickly as possible
- Fix while fresh in your mind
- Reduces integration problems
- Smaller problems are easier to digest
- Don't compound problems
- Allows teams to develop faster, with more confidence

### Continuous Delivery

- Ensures that every change to the system is releasable
- Lowest risk of each release - makes releases "boring"
- Delivers value more frequently
- Get fast feedback on what users care about

## Benefits of CI\CD into revenue

### Deeply expensive downtime

Long-term downtime does not only influence your revenue negatively but also undermines your company's credibility.

### Troubleshooting costs

With CI/CD pipeline properly automated, the process of the product deployment and release is more reliable and developers are not wasting hours on bug-fixing.

### Switching/onboarding costs.

Automated CI/CD let new members of the team get down to business right away without having to deal with an exhausting learning curve.

### Staff turnover costs

Happy employees — more successful company!  
When developers are freed from manual, repetitive tasks, they focus on creating new features and code and continuous quality improvement.
